Financial Services

BluePoint Financial Services

Corporate profile.

Integrated financial, infrastructure,
asset and digital advisory.

2026

Who We Are

Specialist expertise. Connected thinking.

BluePoint Financial Services is a South African professional services firm serving municipalities, public entities, state-owned enterprises and private-sector organisations.

We combine technical financial expertise with commercial understanding and implementation support. Our work connects financial reporting, budgets, revenue, infrastructure, assets, governance and management information to help institutions make better decisions and improve performance.

Chief Executive Officer

Our Purpose

Strengthen the foundations that institutions depend on.

We help clients move beyond compliance towards forward-looking financial management, sustainable delivery and long-term value.

A multidisciplinary platform

Access to finance professionals, accountants, internal auditors, risk specialists, tax practitioners, asset and valuation specialists, engineers and project managers.

This breadth connects financial diagnostics and accounting to infrastructure planning, capital raising, asset optimisation and technology-enabled finance.

01 Financial Advisory & Assurance

02 Infrastructure, Funding & Economic Development

03 Asset Valuation & Investment

04 Digital Transformation & Solutions

Each service area can be commissioned independently or combined around the client's financial and strategic objectives.

01 / Strategy and Reporting

Credible plans. Reliable financial information.

Financial Advisory & Assurance is central to BluePoint's business. We connect technical accounting with the financial realities of operations, infrastructure and institutional viability.

Long-term financial planning

Driver-based revenue and expenditure forecasts, cash-flow projections and projected financial statements. Scenario and sensitivity analysis tests tariffs, collections, costs, capital expenditure and funding against liquidity, solvency and sustainability indicators.

Municipal finance and budgeting

MTREF assumption reviews, budget funding and affordability, tariff and collection analysis, and SCOA-aligned management information. Connect the IDP, budget, mSCOA information and infrastructure priorities to long-term planning.

GRAP, IFRS and financial reporting

Annual financial statement preparation and review, accounting policies, technical papers, reconciliations and accounting-standard implementation. Includes GRAP 104, impairment and Expected Credit Loss modelling, audit files and misstatement remediation.

Municipal planning in context

Connect the IDP, MTREF, mSCOA information, tariffs, collection performance and infrastructure programmes to affordability, funding and long-term sustainability.

01 / Performance and Control

Stronger cash performance. More resilient governance.

Revenue enhancement and financial recovery

Reviews across source data, tariffs, billing, debtors, collection and cash realisation. Includes customer-data cleansing, debtor segmentation, credit control, indigent-management considerations and cost-recovery analysis.

Treasury, liquidity and working capital

Cash forecasting, debtor and creditor analysis, commitments, liquidity gaps, debt affordability and borrowing capacity. Cash optimisation and investment frameworks support timely treasury decisions.

Internal audit, risk and governance

Risk-based, co-sourced and outsourced internal audit; control reviews, performance assessments, pre-audit reviews and verification. Risk registers, early-warning indicators and audit-remediation plans address underlying control weaknesses.

Tax and VAT advisory

VAT reconciliations and recovery, transaction reviews, SARS submissions and queries, audit support and correction of processing errors. Income and provisional tax support, planning, structuring and technical tax matters.

02 / Infrastructure, Funding & Economic Development

From project ambition to financial viability.

A technically desirable project must also be affordable, fundable and sustainable to operate.

Financial modelling and investment analysis

Integrated models connect project and operating assumptions to revenue, costs, cash flow and financing. Depending on the assignment, analysis includes debt-service capacity, DSCR, IRR, return on equity, payback and break-even requirements.

Capital raising and funding strategy

Funding strategies across grants, own revenue, debt, development finance and commercial sources. Assess bankability and investor readiness, prepare business cases and support engagement with lenders, funders and strategic partners.

Infrastructure financial planning

Capital investment forecasts, funding options, debt affordability and ongoing operating and maintenance obligations. Lifecycle and replacement costs bring the full cost of asset ownership into investment decisions.

Feasibility and economic analysis

Cost-benefit studies, options analysis, demand and market assessments, commercial viability reviews and resource-mobilisation strategies. Compare financial implications with economic and service-delivery value.

03 / Asset Valuation & Investment

Assets that inform the investment decision.

Accounting, valuation, technical information and lifecycle considerations brought together.

Asset management and GRAP asset accounting

Asset-register development, cleansing and reconciliation; physical verification and condition assessment; useful-life, residual-value and impairment reviews. Accounting support covers additions, disposals, transfers and work in progress.

Infrastructure unbundling and componentisation

Break complex infrastructure networks into appropriate components with distinct useful lives and consumption patterns. Asset hierarchies, replacement costs and component information support depreciation, maintenance and renewal planning.

Property, asset and investment valuation

Market-comparison, income or investment, and cost or replacement-cost approaches, selected for the asset and purpose. Valuation supports reporting, transactions, utilisation, rationalisation and asset investment optimisation.

Beyond accounting value

Understand condition, utilisation, maintenance and renewal needs, alongside the completeness and auditability of the financial asset register.

04 / Digital Transformation & Solutions

Better processes.
More useful intelligence.

Practical transformation that improves speed and reliability without weakening governance.

Finance process transformation

Review operating models and workflows across budgeting, reporting, reconciliations, revenue, month-end and asset administration. Redesign processes and automate bottlenecks while preserving controls and governance.

Analytics, dashboards and forecasting

Revenue, debtors, expenditure, cash, assets, budgets and risk indicators brought into trend, variance and exception reporting. Automated forecasting and scenario tools show the financial effect of changing assumptions.

Financial data integrity and systems support

Data cleansing, validation and reconciliation; customer and master-data improvement; system-to-report reconciliations and controls over information flows. Improve traceability and reliability, rather than digitising existing weaknesses.

Integrity before automation Technology should improve the traceability and usefulness of information, rather than digitising existing weaknesses.

Selected Assignments / 1

Expertise applied across sectors.

Selected assignments recorded in BluePoint's corporate profile. Descriptions indicate the nature of the work rather than quantified outcomes.

Road Traffic Management Corporation (RTMC)	Development of a funding model incorporating revenue enhancement, business process re-engineering, organisational redesign and policy and legislative review.
Emadlangeni Municipality	Development of a revenue enhancement strategy.
Molemole Municipality	Development of a revenue enhancement strategy.
Mopani District Municipality	Feasibility and costing assignments incorporating financial viability modelling for mining, beneficiation and renewable/alternative energy initiatives.
Gauteng Department of Roads and Transport	Review of agency fees payable to municipalities acting as revenue-collecting agents, with recommendations on an appropriate fee structure.
Department of Environmental Affairs	Funding and resource-mobilisation assignments including the National Asbestos Management Strategy, resource requirements for air-quality implementation and the National Framework for Climate Services.

Selected Assignments / 2

Expertise applied across sectors.

Selected assignments recorded in BluePoint's corporate profile. Descriptions indicate the nature of the work rather than quantified outcomes.

Shell Downstream South Africa	Asset valuations, NERSA tariff calculations and applications, and a carbon-tax study and calculator.
SASOL	Cost-benefit studies supporting the Sulphur Reduction Roadmap.
Alexkor SOC Limited	Due diligence and development of a go-forward business case.
Council for Scientific and Industrial Research (CSIR)	Fundraising strategy for the Gauteng Industrial Symbiosis Programme.
Blouberg Municipality	Design and implementation of a vendor management system supporting SCM processes and National Treasury procurement compliance.
Ford Motor South Africa	Graduate payroll and related statutory administration services.

Institutional Sustainability

See the complete financial picture.

Examine the underlying connections

A revenue shortfall may arise from data, tariffs, billing, collection or affordability. A technically sound capital programme may be financially unsustainable. A compliant asset register may still fail to inform maintenance and renewal.

We combine accounting discipline, financial modelling, infrastructure economics, asset intelligence, governance and technology to examine these issues together.

Go beyond the forecast

When long-term analysis identifies pressure in revenue, assets, infrastructure funding, liquidity, controls or data, our complementary capabilities can help address the underlying causes.

South Africa's institutional context

Municipalities, SOEs and public entities face constrained revenue, ageing infrastructure, creditor pressure, skills shortages and heightened accountability expectations.

Financial sustainability must coexist with legislative compliance, audit requirements, transformation and service-delivery obligations. BluePoint supports clients operating in PFMA and MFMA environments.

Governance across changing conditions

Our approach is politically non-partisan. Credible information, transparent assumptions, documented decisions, clear accountability and sound controls provide continuity across leadership and political cycles.

The Outcomes We Seek

Capability that lasts beyond the assignment.

Institutional Challenge	Our Contribution	Intended Outcome
Financial sustainability	Long-term planning, scenarios, revenue and cash-flow advisory	Funded plans, stronger liquidity and earlier intervention
Recurring audit findings	Reporting, internal controls, assurance and remediation	Credible information and sustainable control improvement
Revenue underperformance	Tariffs, billing, debtor analytics, collection and recovery	Better cash conversion and revenue resilience
Infrastructure affordability	Capital models, lifecycle costs, funding and borrowing analysis	Prioritised, affordable and fundable programmes
Governance and accountability	Risk, internal audit and management information	Better oversight, transparency and accountability
Consultant dependence	Embedded tools, coaching, knowledge transfer and process redesign	Stronger internal capability and continuity

Our commitment Professional excellence, integrity and client-centred delivery. Transparent models, clear documentation and knowledge transfer help management continue using the work after an assignment ends.

Beyond the Assignment

Build capability. Invest responsibly.

Our intended CSI direction aligns with our strengths in finance, education, enterprise capability and governance.

These are areas of focus and planned development. Proposed partnerships and support are not presented as completed programmes.

Education and finance talent

Career exposure, mentoring and workplace readiness. As the programme matures, explore bursary, internship and graduate-development partnerships.

Community financial literacy

Targeted workshops and accessible material on budgeting, credit, municipal accounts, tariffs, cash flow and responsible financial management.

Enterprise and supplier development

Mentoring and financial-management support for qualifying enterprises, including costing, governance, business models and investor or funder readiness.

Governance for social impact

Where appropriate, intended pro bono or reduced-fee support for selected non-profit and community organisations in budgeting, controls and financial governance.

Climate and infrastructure resilience

Water stress, energy transition, climate variability and ageing infrastructure influence long-term financial choices.

Our contribution is financial and strategic: modelling affordability, lifecycle costs, funding implications and the financial consequences of resilience investments.

South Africa’s next chapter

We aim to help institutions move from short-term remediation to durable capability: planning credibly, investing responsibly, maintaining assets, using data intelligently and accounting transparently for results.

BluePoint
Financial Services

Build. Understand. Win.

Integrated advisory for sustainable institutions and investable futures.
